

IBN SINA EMERGENCY DEPARTMENT

Paediatric Encounter Record - Clinical Data Sheet

SYNTHETIC RECORD - FICTIONAL PATIENT - NOT REAL PATIENT DATA
Generated for research prototype evaluation. Not for clinical use.

1. PATIENT IDENTIFICATION AND DEMOGRAPHICS

Medical record number	IBN-002
Patient name	Malak Tarek Hassan
Date of birth	2024-05-02
Age at presentation	2 years
Sex	Female
Accompanying guardian	Both parents present
ED arrival date/time	2026-08-13 11:15
Mode of arrival	Ambulatory, brought by family

2. INSURANCE AND ADMINISTRATIVE

Provider	MedCare Egypt - Corporate Scheme
Policy number	MCE-2210-55907
Plan	Dependant cover under parent policy
Coverage status	Active
Co-payment	EGP 100 ED attendance
Referral required	No

3. PRESENTING COMPLAINT

Chief complaint Cough and runny nose for 3 days with low-grade fever

History of presenting illness

Three days of coryza and dry cough following an upper respiratory illness in her older brother. Low-grade fever, maximum 38.0 C, responding well to paracetamol. Feeding and drinking normally. Playing as usual between coughing bouts. Sleeping through the night. No breathing difficulty reported by parents at any point. No vomiting, no diarrhoea, no rash. No known TB contact.

4. TRIAGE OBSERVATIONS AND VITAL SIGNS

Parameter	Value	Interpretation
Temperature (axillary)	37.9 C	Mildly raised
Respiratory rate	32 /min	Normal for age
Heart rate	118 /min	Normal for age
SpO2 (room air)	98 %	Normal
Blood pressure	98/60 mmHg	Normal
Capillary refill	<2 seconds	Normal
Weight	12.4 kg	50th centile
AVPU	A - alert	Normal

5. CLINICAL EXAMINATION FINDINGS

- Alert, playful, smiling and interactive throughout assessment.
- No recession, no nasal flaring, no grunting. No accessory muscle use.
- Clear rhinorrhoea. Mild pharyngeal erythema, tonsils not enlarged.
- Scattered coarse crackles left mid zone; no focal dullness.
- No wheeze. Air entry equal bilaterally.
- Well hydrated. Drinking normally. Nappies wet as usual.
- No rash. No lymphadenopathy.

6. PAST MEDICAL, DRUG, FAMILY AND SOCIAL HISTORY

Birth history	Term (40+0), elective caesarean section, birth weight 3.4 kg. Uncomplicated.
Developmental	Normal milestones. Two-word phrases. Walking since 13 months.
Immunisations	Fully up to date per national schedule, including PCV13.
Past medical history	Nil significant. One episode of otitis media age 18 months, resolved with oral amoxicillin.
Past surgical history	None.
Prior hospital admissions	None.
Current medications	Paracetamol PRN only.
Allergies	No known drug allergies.
Family history	Older brother currently with URTI symptoms. No asthma, no TB, no immunodeficiency.
Social history	Lives with parents and one sibling. No household smokers. Attends nursery 3 days per week.

7. LABORATORY RESULTS

Results available at the time of clinician review.

Investigation	Result	Reference range	Flag
White cell count	9.8 x10 ⁹ /L	4.0-12.0	Normal
Neutrophils	34 %	30-60	Normal
Lymphocytes	58 %	30-60	Normal
Haemoglobin	12.1 g/dL	11.5-14.5	Normal
Platelets	295 x10 ⁹ /L	150-450	Normal
C-reactive protein	18 mg/L	<5	Mildly raised
Procalcitonin	0.12 ng/mL	<0.5	Normal
Sodium	138 mmol/L	135-145	Normal
Urea	3.9 mmol/L	2.5-6.5	Normal
Venous lactate	1.1 mmol/L	<2.0	Normal
Respiratory viral PCR	Positive - rhinovirus/enterovirus	Negative	POSITIVE
Blood culture	Not indicated - not collected	-	N/A

8. IMAGING REQUEST AND LINKED STUDY

Imaging order	Chest radiograph, AP projection, routine. Indication: persistent cough with focal auscultatory findings.
Linked image file	chest_xray/test/PNEUMONIA/person1_virus_6.jpeg
Image source	Kermany et al. chest X-ray dataset (CC BY 4.0)
Radiographer notes	Good inspiration. No rotation. Technically adequate film.
Radiology report	NOT YET REPORTED - awaiting interpretation

9. RECORD STATUS

Diagnosis	NOT YET ESTABLISHED - pending clinician assessment
Disposition	NOT YET DECIDED - pending clinician assessment
Record completeness	Registration, triage, clerking, labs and imaging request complete
Data classification	SYNTHETIC - fictional patient, safe for third-party API processing
