

IBN SINA EMERGENCY DEPARTMENT

Paediatric Encounter Record - Clinical Data Sheet

SYNTHETIC RECORD - FICTIONAL PATIENT - NOT REAL PATIENT DATA
Generated for research prototype evaluation. Not for clinical use.

1. PATIENT IDENTIFICATION AND DEMOGRAPHICS

Medical record number	IBN-003
Patient name	Omar Sami Abdelrahman
Date of birth	2023-01-26
Age at presentation	3 years
Sex	Male
Accompanying guardian	Mother only - father working abroad
ED arrival date/time	2026-08-13 19:05
Mode of arrival	Ambulatory, brought by family

2. INSURANCE AND ADMINISTRATIVE

Provider	Uninsured - self pay
Policy number	N/A
Plan	N/A
Coverage status	Self-pay. Referred to social work for subsidy assessment.
Co-payment	Full cost; family reports financial hardship
Referral required	No

3. PRESENTING COMPLAINT

Chief complaint Fever and cough for 5 days, breathing faster since yesterday

History of presenting illness

Five days of fever and productive cough. Seen at a local pharmacy on day 3 and given an unspecified oral syrup with no improvement. Tachypnoea noted by mother since yesterday. Reduced appetite but still drinking. No vomiting. No chest pain reported. Mother reports the child seems 'more tired than usual' but is still playing intermittently. No TB contact known, though a neighbour was treated for TB two years ago.

4. TRIAGE OBSERVATIONS AND VITAL SIGNS

Parameter	Value	Interpretation
Temperature (axillary)	38.6 C	HIGH
Respiratory rate	42 /min	HIGH
Heart rate	132 /min	Raised
SpO2 (room air)	92 %	BORDERLINE LOW
Blood pressure	95/60 mmHg	Normal
Capillary refill	2 seconds	Normal
Weight	13.1 kg	10th-25th centile
AVPU	A - alert	Normal

5. CLINICAL EXAMINATION FINDINGS

- Alert and interactive but tires with exertion.
- Mild subcostal recession. No grunting, no nasal flaring.
- Coarse crackles right lower zone. Reduced air entry right base.
- No dullness to percussion. No wheeze.
- Taking oral fluids in small volumes; mother reports reduced appetite.
- Mildly dry mucous membranes. Nappies wet but less than usual.
- No rash. No hepatosplenomegaly.

6. PAST MEDICAL, DRUG, FAMILY AND SOCIAL HISTORY

Birth history	Preterm 35+4, spontaneous vaginal delivery, birth weight 2.3 kg. 6 days in special care for feeding support.
Developmental	Mild speech delay, otherwise appropriate. Not yet in nursery.
Immunisations	Incomplete - pentavalent 3rd dose and PCV13 booster not received. No documented measles booster.
Past medical history	Recurrent lower respiratory infections - 3 episodes in the past 18 months, all managed as outpatient. Mild iron deficiency anaemia diagnosed 6 months ago, iron course not completed.
Past surgical history	None.
Prior hospital admissions	None (neonatal special care only).
Current medications	Nil regular. Ferrous sulphate previously prescribed, discontinued by family.
Allergies	No known drug allergies.
Family history	No asthma. Neighbour treated for pulmonary TB 2 years ago - contact status not formally traced.
Social history	IMPORTANT: Family resides approximately 65 km from this hospital in a rural village. No private transport. No public transport available after 20:00. Mother is sole carer for four children under 8; father works abroad and is not contactable today. No telephone at home; mother uses a neighbour's phone. Household uses biomass fuel for cooking indoors.

7. LABORATORY RESULTS

Results available at the time of clinician review.

Investigation	Result	Reference range	Flag
White cell count	15.6 x10 ⁹ /L	4.0-12.0	HIGH
Neutrophils	71 %	30-60	HIGH
Lymphocytes	22 %	30-60	LOW
Haemoglobin	9.6 g/dL	11.5-14.5	LOW
Platelets	381 x10 ⁹ /L	150-450	Normal
C-reactive protein	92 mg/L	<5	HIGH
Procalcitonin	1.8 ng/mL	<0.5	HIGH
Sodium	136 mmol/L	135-145	Normal
Urea	5.2 mmol/L	2.5-6.5	Normal
Venous lactate	1.6 mmol/L	<2.0	Normal
Blood glucose	5.1 mmol/L	3.5-7.0	Normal
Respiratory viral PCR	Negative	Negative	Normal
Blood culture	Collected pre-antibiotic; result pending	-	PENDING

8. IMAGING REQUEST AND LINKED STUDY

Imaging order	Chest radiograph, AP projection, urgent. Indication: fever with tachypnoea and focal signs; assess for consolidation.
Linked image file	chest_xray/test/PNEUMONIA/person8_bacteria_37.jpeg
Image source	Kermay et al. chest X-ray dataset (CC BY 4.0)
Radiographer notes	AP film. Slightly shallow inspiration. No significant rotation.
Radiology report	NOT YET REPORTED - awaiting interpretation

9. RECORD STATUS

Diagnosis	NOT YET ESTABLISHED - pending clinician assessment
Disposition	NOT YET DECIDED - pending clinician assessment
Record completeness	Registration, triage, clerking, labs and imaging request complete
Data classification	SYNTHETIC - fictional patient, safe for third-party API processing
