

IBN SINA EMERGENCY DEPARTMENT

Paediatric Encounter Record - Clinical Data Sheet

SYNTHETIC RECORD - FICTIONAL PATIENT - NOT REAL PATIENT DATA
Generated for research prototype evaluation. Not for clinical use.

1. PATIENT IDENTIFICATION AND DEMOGRAPHICS

Medical record number	IBN-004
Patient name	Layla Ahmed Mostafa
Date of birth	2025-06-04
Age at presentation	14 months
Sex	Female
Accompanying guardian	Mother present
ED arrival date/time	2026-08-13 16:30
Mode of arrival	Ambulatory, brought by family

2. INSURANCE AND ADMINISTRATIVE

Provider	National Health Insurance Authority (NHIA)
Policy number	NHIA-9932-10475
Plan	Family - Category A
Coverage status	Active
Co-payment	EGP 50 ED attendance
Referral required	No

3. PRESENTING COMPLAINT

Chief complaint Noisy breathing and cough for 2 days

History of presenting illness

Two days of coryza progressing to cough and audible wheeze. Low-grade fever. Feeding reduced but maintained at roughly two-thirds of normal intake. No apnoea, no cyanosis, no colour change episodes. Older sibling has a cold. Presentation during peak seasonal respiratory virus activity. No prior wheeze episodes. No choking episode reported. No sudden onset.

4. TRIAGE OBSERVATIONS AND VITAL SIGNS

Parameter	Value	Interpretation
Temperature (axillary)	37.6 C	Mildly raised
Respiratory rate	46 /min	Raised
Heart rate	138 /min	Raised
SpO2 (room air)	94 %	Borderline
Blood pressure	94/56 mmHg	Normal
Capillary refill	<2 seconds	Normal
Weight	9.8 kg	50th centile
AVPU	A - alert	Normal

5. CLINICAL EXAMINATION FINDINGS

- Alert, mildly irritable but consolable. Interactive with mother.
- Mild subcostal recession. No grunting.
- WIDESPREAD BILATERAL EXPIRATORY WHEEZE with prolonged expiratory phase.
- Fine inspiratory crackles heard diffusely, no focal consolidation.
- NO focal dullness. Air entry symmetrical.
- Profuse clear rhinorrhoea. Feeding at approximately 70 percent of normal volume.
- Adequate hydration. Nappies wet.

6. PAST MEDICAL, DRUG, FAMILY AND SOCIAL HISTORY

Birth history	Term (38+5), spontaneous vaginal delivery, birth weight 3.0 kg. Uncomplicated.
Developmental	Normal. Cruising, few words.
Immunisations	Up to date for age.
Past medical history	First episode of wheeze. No prior respiratory admissions. No eczema.
Past surgical history	None.
Prior hospital admissions	None.
Current medications	Paracetamol PRN. No inhalers.
Allergies	No known drug allergies.
Family history	Mother had childhood asthma, resolved. Older sibling currently with URTI.
Social history	Lives with parents and one sibling. No household smokers. Not in nursery.

7. LABORATORY RESULTS

Results available at the time of clinician review.

Investigation	Result	Reference range	Flag
White cell count	8.2 x10 ⁹ /L	6.0-17.0	Normal
Neutrophils	38 %	25-55	Normal
Lymphocytes	52 %	35-65	Normal
Haemoglobin	11.8 g/dL	10.5-13.5	Normal
Platelets	342 x10 ⁹ /L	150-450	Normal
C-reactive protein	9 mg/L	<5	Marginally raised
Procalcitonin	0.08 ng/mL	<0.5	Normal
Sodium	139 mmol/L	135-145	Normal
Urea	3.2 mmol/L	2.5-6.5	Normal
Venous lactate	1.0 mmol/L	<2.0	Normal
Respiratory viral PCR	POSITIVE - respiratory syncytial virus (RSV)	Negative	POSITIVE
Blood culture	Not indicated - not collected	-	N/A

8. IMAGING REQUEST AND LINKED STUDY

Imaging order	Chest radiograph, AP projection, routine. Indication: wheeze with borderline saturations; exclude focal consolidation.
Linked image file	chest_xray/test/NORMAL/NORMAL2-IM-0222-0001.jpeg
Image source	Kermany et al. chest X-ray dataset (CC BY 4.0)
Radiographer notes	AP film, adequate inspiration. Hyperinflation may be present; assess carefully.
Radiology report	NOT YET REPORTED - awaiting interpretation

9. RECORD STATUS

Diagnosis	NOT YET ESTABLISHED - pending clinician assessment
Disposition	NOT YET DECIDED - pending clinician assessment
Record completeness	Registration, triage, clerking, labs and imaging request complete
Data classification	SYNTHETIC - fictional patient, safe for third-party API processing
